

Have you heard...

Have you Heard...

of the amazing fluid that penetrates into a millionth of an inch?

...that turns rust into mush?

...that loosens bolts after 25 years?

...that stops slow-down in air driven tools?

...that even helps to start damp motors?

If you are one of the 30,000 important concerns who have been depending upon Kano Kroil for 20 years or more, then you do know. If not, read the enclosed folder and let's get acquainted.

Kroil is an inexpensive item, but its use saves important man hours and sometimes avoids production stoppage. Those who know Kroil insist on having it on hand for emergencies at all times.

Read about the "Squirt Deal" wherein we send you a gallon of Kroil, a Kroiler and an AeroKroil can. We guarantee Kroil will do anything you expect of it. If not, keep the AeroKroil can with our compliments -- return the other two items and the charge will be cancelled.

Cordially yours,

KANO LABORATORIES, INC.,

O'K: 135

P.S. See back page for special offer.

It provides an easy way for you to try Kroil under your own working conditions.

When metal parts stick together they create an emergency that costs man hours and may threaten production. Cave-man methods are likely to ruin the parts and cause even more trouble. That is the reason that today the leading shops in America depend on Kano Kroil for loosening frozen parts, and for many other important operations.

For Storing and Cleaning Dies

A leading manufacturer of farm equipment uses Kroil on dies when they are put away for storage and again when they are taken out to clean them before use.

A truck operator reports that he uses Kroil on the valve sleeves, fender bolts, cylinder blocks and many other hard-to-separate parts in his shop.

For Removing Broken Taps

"For thoroughly wetting a hole in connection with tap-extractor. Even taps which are shattered into a blind hole are benefitted. Seems the Kroil permits broken segments to "ride" back into their original position in the unbroken tap, eliminating "lock-nut" effect which is the principal impediment to tap-removal. And of course Kroil in the threads themselves helps keep broken tap or segments from wedging."

Construction Machinery Ready To Roll

"As I remember, we had quite a bit of construction machinery lying around in our yard. Suddenly there was a rush call for some of it but 90% of the pulleys on this machinery was locked by rust. We then applied Kroil to each one and the next morning the machinery was ready to roll."

Kroilers on Bench at All Times

"We keep two of your long spout oilers Kroilers on the bench at all times. The help don't bother to see if the nut or screw is rusted or not . . . a jerk or two of Kroil on it anyway . . . and it surely pays off."

"Maintenance Ideas"

Maintenance Ideas is the name of a bulletin that brings together almost a hundred ideas for using Kano products profitably. These ideas were gathered from letters and contacts with our customers. A copy is available on request.

Prevent Fouling of Marine Engines

A customer writes, "Along the seacoast of Carolina we have very high humidity and often have trouble starting Marine engines. We have found that if we squirt Kroil on the plugs and distributor the engine can be started at once. If it does not start, then the trouble is not due to moisture."

Stops Slowdown in Air Driven Tools

A large airplane factory reported that they were having trouble with air-driven rivet guns. Even though lubricated they slow down after a few hours use. . . . Workers had to have fresh guns to keep up production. A maintenance man tried Kroil and to his amazement the gun speeded up immediately and did not slow down for the rest of the day. Now they lubricate all air-driven equipment with Kano Kroil on regular schedule.

Faster, Cleaner Cutting, Longer Tool Life

From several different sources we have been told that Kroil is very useful on certain cutting operations. For instance, it makes hacksaw blades last many times longer and cut faster. It is reported that it reduces the clogging of files and makes them last longer and cut better too. In honing work it prevents the stones from clogging up with metal and provides a smoother job. Don't take our word for these things. Try them out yourself and see if these customers are right.

"Turned Rust Into Mush"

"Screws of our monotype air filter had rusted into holder. For over two days we tried unsuccessfully to get screws out. Soaked the parts in kerosene, light oil and several penetrating oils. \$50,000 worth of monotype equipment lying idle while we fussed with 12 lousy screws. Then we used Kroil. Darn stuff turned rust into mush so we could turn the screws and use the parts again."

"Turned Them Off With His Fingers"

One of our auto mechanic customers reported that he always had difficulty with manifold nuts, until he started using Kroil. In one stubborn case he applied Kroil to all manifold nuts and then went on about some other work. A half hour later he came back and was able to turn them all off with his fingers.

"We have excellent results (using Kroil) on loosening stuck slides on musical instruments . . . about as severe a test as you run up against."

SOME OF OUR REPEAT CUSTOMERS

These people tried Kroil—liked what they saw—and came back for more. The first sale is hard enough, but the proof comes in repeat orders.

AND THERE ARE 20,000 MORE.

Embalmer's Needle To Bulldozer

"We found Kroil will loosen almost anything that is tight and rusted, from an embalmer's needle to a bulldozer. It is invaluable in our lawn-mower service department."

"Being a pipefitter in an oil research laboratory, I have run across a number of problems. There were steam pipes and fittings which had to be taken apart. Wrenches with leverages and hammering were used to no avail. I squirted a few drops of KROIL on the frozen pipe threads and after a few minutes time the pipes were broken apart with a small wrench and without any hard tugging or pulling.

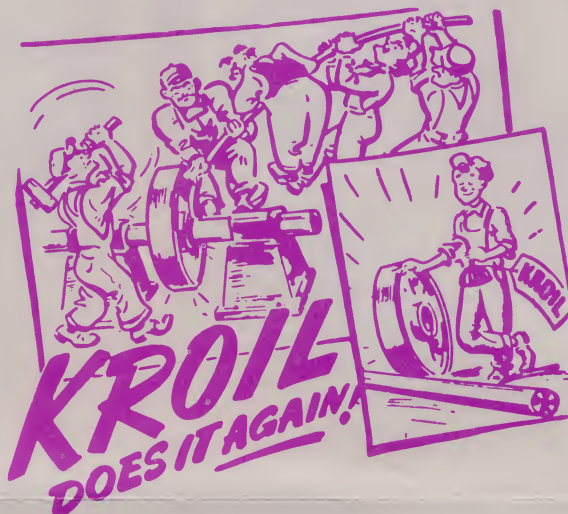

The Kroiler is a 'permanent party' in my tool box now."

Government Specifications for Kroil

When Federal Government Departments order Kroil from the catalog they attach these specifications.

SPECIFICATIONS: To penetrate to one millionth of an inch, for loosening frozen parts, odor shall not be irritating or nauseating, compound shall contain no components of toxicity or separate under normal storage condition nor gum or harden on exposure and shall be free of sediment, dirt, water or frozen matter.

Test	Limits
Flash Point, °F, Minimum	120
Fire Point, °F, Minimum	125
Pour Point, °F, Maximum	-60
Surface Tension, Dynes Cm., Max.	35
Ash Content Percent, Maximum	0.1
Viscosity, SSU, 100 °F	32-45
Carbon Residue, % Max.	0.1
Specific Gravity at 60 °F	.860-.880
Volatiles, Percent at 212 °F	36 - 34
Bromine Number	15 - 20
Saponification Number	2 - 10
Sulfonation, Percent Unreacted	50 - 75
Neutralization Number Maximum	0.5
Corrosion	NILL

"Your Kroil is like an extra employee. Five men, total of 825 pounds, using levers and sledges, struggled half an hour with a frozen shaft—no luck, so all went out for a smoke to calm down. One man weighing 140 pounds used 'Kroil' and by the time we returned had lifted the shaft out with no leverage whatsoever."

Not a Single Broken Stud

"I have two large yachts that have been out of service several years although they have been in wet storage (that means in the water). I am now in the process of overhauling a pair of very large engines (Speedways).

"About a year ago I ordered a gallon of Kroil for use around my boat house and have told so many of my boat friends about Kroil and have given an oil can full here and there, that when I wanted to use it for the big overhaul job on these Speedways, I found the can about empty, just enough left to lubricate about 1/2 of one motor, all the nuts and bolts came off very easy not a single broken stud, but when we ran out of Kroil the motor "mac" (and a good one) broke about every third stud that was not lubricated with Kroil."

For Releasing Clay Pipe Dies

A manufacturer of clay pipe sprays Kroil on pipe dies because it keeps the clay from sticking to the dies. Cement contractors spray Kroil on cement tools and wheelbarrows. Saves time in cleaning them up at the end of the day.

Saved 15 Hours Work

"Our shop is located near the waterfront in Brooklyn and during the last few weeks the weather has been very humid. One day the top came off the vapor-degreaser and the fumes filled the shop. Within an hour all the machines and materials started to rust. We then spent the rest of the day with oily rags wiping down everything but it did not help at all. I then put some 'KROIL' in a spray gun and sprayed all the machines and filled the air with a heavy fog. The next day all machines were clean again. I figure that a quart of "KROIL" saved us at least fifteen hours work, besides getting into hidden parts of the machines.

KANO KROIL

TRADE MARK

The Oil That Creeps

LOOSENS FROZEN PARTS

For . . .

- . . . loosening stuck metal parts
- . . . lubricating air driven tools
- . . . storing dies
- . . . removing broken taps
- . . . dismantling equipment
- . . . faster, cleaner cutting and honing
- . . . cleaning concrete tools
- . . . cleaning guns and fishing reels
- . . . salvaging used equipment

Now, we have placed an up-side-down valve in the AeroKroil can. This permits you to apply Kroil where ever you wish without the loss of the charging gas . . . A Kano improvement.
